WELCOME TO MEDINA POWDER COATING CORPORATION!

Today's customers demand and expect the highest quality for their products. Medina Powder Coating follows the same philosophy as its sister company, Medina Plating, which is: **Quality First!**

Medina Powder Coating Corporation has over 50 years of coating experience with the automotive, industrial, and consumer industries. We provide service within a 100 mile radius of Medina, Ohio to the Greater Cleveland Area.

Consider us for **ALL** of your powder coating needs! We are your home for:

- Dual Coatings!
- MPCC has a fully enclosed & filtered Spray Booth
- We can customize parts up to 20' in Length!
- Anything you can imagine, we can powder coat!

Most powder companies utilize iron phosphate spray wash for the undercoat of powder adhesion. The phosphate offers no rust protection should your powder become chipped or cracked. With Medina Powder Coating's dual coating system, you get over 2,000 hours (Zn Ni) of salt spray protection without the powder, and over 3,000 hours with our dual coating!

We also offer Media Blasting!!!

Media blasting is a quick and efficient way of restoring old parts, but it is also a dangerous process best left to professionals. Media blasting uses compressed air and media such as sand in order to strip the finish of your part down to bare metal, the ideal finish for new primer and paint. This process is very effective at restoring old parts, industrial machinery, & metal furniture. Media comes in a variety of product. Check out our website at
